

TIDE TABLES
KANDLA (Gulf of Kachchh)
SITE OF THE TIDAL OBSERVATORY
(1950)

Lat 23° 01'N, Long 70° 13'E

PREFACE

The following predictions are based on Harmonic Analysis of observation of 1974 corrected for the actual of 1974 to 1980. The predictions including harmonic shallow water (HSW) corrections using 100 open sea constants and 19 shallow water constants have been made in IBM.370. Temporary variations in wind and barometric condition cannot be predicted and allowed for in these tables.

The heights in these tables are referred to the datum of soundings in the charts of Kandla. These are given in meters.

The heights of the highest high water and lowest low water recorded, the local mean sea level etc. with reference to the datum of soundings, are shown in the diagram.

The depth of water at the times of high and low water will be found by adding the height given in the Tables to the values of the soundings.
